Challenge
A web filtering solution that would secure the Internet access for several Android devices separately while allowing customers to control all of them remotely

Impact
With SafeDNS solution the care home residents can browse the internet safely

((•)) SAFEDNS

Problem

GDS Digital believes that it is crucial for everyone to have access to digital tools and services, so they make it possible ensuring affordability and security.

GDS Digital uses simplified, easy-to-use Android devices vulnerable to cyber attacks. Moreover, setting up a solution on the network level proved to be impossible, as each device used 4G internet connection.

They needed the solution that once implemented on every device, would not require any maintenance but it would guarantee safe access to the Internet.

Solution

Of all the SafeDNS services for web content filtering and online safety, the cloud content filtering service was considered the most suitable. With the SafeDNS cloud web filtering solution, care homes residents can use the Internet avoiding inappropriate or malicious websites. GDS Digital values simplicity, which is why our solution fits well – cloud web filtering does not require any additional hardware making it easy to implement.

GDS Digital uses our solution through VPN, which makes it possible to control and monitor 870 devices separately. Every month the report is sent and GDS Digital's customers can look through the statistics anytime. It also gives the opportunity to have web categorization no matter where the devices are, which allows to have all the devices secured.

Result

SafeDNS cloud web filtering made the residents' Internet surfing safe, being a key layer of security on their devices. Covering all of the requirements, the SafeDNS solution fit perfectly as it is reasonably priced, effective and not complicated.

((ℹ)) SAFEDNS

The SafeDNS filtering technology recieved a prestigious award from the world-famous test lab, Software Suggest. SafeDNS solutions are recognized as having a good value for money.

SafeDNS blocks a whopping 98.5% of requests to adult content.
